ADDED VALUE

Komatsu's new GD655-5 motor grader cab design is among features that improve productivity

One of the keys to productivity in motor grader work is the operator's ability to see the material and the blade as clearly as possible. Komatsu enhanced that ability in the new GD655-5 with a patented hexagonal cab that provides improved all-around visibility.

"The better visibility, the better production," said Product Manager Steve Moore. "We set out to make the most comfortable, productive and efficient motor graders possible. Komatsu did that by adding features, starting with a low-noise operator platform design that's similar to the unsurpassed, award-winning cabs in our small-dozer line. Then we built on that to provide even more value."

Better visibility is only part of the value-added equation, as Komatsu increased both horsepower and operating weight by nearly 10 percent, while decreasing fuel consumption by 20 percent compared to the GD655-5's predecessor. Its new, patented, dual-mode transmission system is mounted in the front for better weight distribution and provides on-the-go, full power shifting as well as inching capability and automatic shifting in the higher gear ranges.

"The operator has total control and can run the grader in direct drive (manual mode) for tough grading, or with the lock-up torque converter (auto mode) for fine work that may require inching," said Moore. "The higher horsepower allows for better productivity at higher speeds in applications such as road building and maintenance and snow removal. The combination of manual and auto is very effective for low-speed smooth operation by virtually eliminating engine stall. Komatsu is the only manufacturer to offer that."

Additional control valves

Komatsu also offers two additional control valves for a total of ten, making attachment additions easier. Other new standard features include a Turbo II precleaner, right and left independent blade-lift float, front-bar-mounted lights and a toolbox with lock. KOMTRAX 2.5 is also standard, providing better maintenance tracking. Users can perform nearly all services from the ground, including fueling for faster fill-ups.

"That reduces downtime and boosts production time," noted Moore. "Another key element is a new hydraulic, variable-speed, reversible fan that minimizes dust entering the radiator, which also minimizes downtime. With the GD655-5, as well as other Dash-5 motor graders we're introducing, we set out to engineer a machine that would significantly improve productivity and profitability. More horsepower and operating weight, as well as additional standard features, add value for anyone who uses a motor grader." ■

Product Manager

Brief Specs on Komatsu GD655-5 Motor Grader

Model	GD655-5
Net hp	218 hp
Operating Weight	38,415 lbs.
Blade Width	14 ft.

A new hexagonal cab provides exceptional all-around visibility and is among several new features designed to improve productivity and reduce owning and operating costs.
