

MORE COMFORTABLE CAB

Redesigned work platform of the PC160LC-8 helps operators maintain productivity

A common adage in equipment says “a comfortable operator is a more productive operator.” Starting with that nugget of wisdom, Komatsu designed its new PC160LC-8 to foster an environment where operators can thrive.

The PC160LC-8 has a newly designed, larger cab (compared to the Dash-7 model) with excellent sound absorption. Noise-source reduction and a quieter Tier 3 engine, hydraulic equipment and air conditioner make the excavator’s noise level similar to a new automobile. Viscous damper mounting coupled with a highly rigid deck reduces vibration as well.

“There’s more to the equation than just noise and vibration reduction,” noted Product Manager Doug Morris. “The cab is pressurized with automatic air conditioning, an air filter and a higher internal air pressure to minimize the amount of dust that enters the cab. Operators who have used the PC160LC-8 notice right away how much more comfortable it is.”

Operators can set the temperature in the cab using the upgraded LCD monitor panel, which also allows them to set the proper working mode to match conditions. Five modes are available, including an Economy mode for lighter digging and loading, which reduces fuel consumption by 10 percent compared to the Power mode.

Durable, easy to maintain

No matter the conditions, operators can be confident that the PC160LC-8 will get the job done. Komatsu engineered it with a boom and arms of thick-plate, high-tensile-strength steel. Designed with large cross-sectional areas and generous use of castings, working attachments exhibit long-term durability and high resistance to bending and torsional stress.

“The PC160LC-8 is the largest in what’s considered our light excavator line, but don’t let the word ‘light’ fool you. It has the strength and durability to handle substantial work loads,” said Morris. “At the same time, it’s light enough at less than 40,000 pounds to be easily transported, as well as mobile enough for maneuverability on the jobsite. It’s great in commercial and residential applications.”

Morris said with KOMTRAX as standard equipment, it’s also easy to track and maintain proper service intervals. The radiator, aftercooler and oil cooler are arranged side-by-side for quick cleaning, removal and installation. Maintenance costs are reduced with high-performance filtering materials and long-life oil that extend intervals to 500 hours for engine oil and filter, 1,000 hours for hydraulic filter and 5,000 hours for hydraulic oil. ■

Brief Specs on Komatsu PC160LC-8 Excavator

Model	Net Hp	Operating Weight	Bucket Capacity
PC160LC-8	115 hp	36,770-37,740 lbs.	0.48-1.24 cu. yd.

The PC160LC-8 has a larger, more comfortable cab, helping keep operators productive longer. It also features an efficient engine, low fuel consumption and is easily transported.
